

## There's a Snake in My Boot Sector

The story goes that a woman called tech support, complaining that her computer was making hissing and crackling sounds, and then started smoking. When the geeks on wheels arrived, they found a slithery surprise. A snake had found its way into her CPU. Maybe it was after the mouse ... humm.

Can you imagine the look on the techie's face if the snake had been *alive* when he opened the computer up? Yikes! I'll tell you one thing ... If I were this woman I'd have my home fumigated pronto.

Well, it just goes to show that you can't predict all types of hazards. When it comes to risk management, do your best to identify the possible risks, but always be prepared to deal with the unexpected.

Check [www.safetycenter.navy.mil/orm](http://www.safetycenter.navy.mil/orm) to see how risk management can help you.
